ABSTRACT

The spread of disease today is increasingly troubling for society, whether it is a natural or an artificial weapon. One of them is COVID-19 pandemic which has impact all the world. All aspects of political, economic, social, cultural, defense and security have been affected by this pandemic. Along with the development of today's information globally, it experiences considerable significance and often becomes massively disrupted information. It cannot be denied that the era of the industrial revolution triggered one another to compete to be the best and foremost. The purpose of this research is to provide input, ideas and ideas that provide progress, especially in the Indonesian archives development to be better and more advanced in the present and the future and to be prepared to win opportunities in a global uncertainty. The research method used in this research is qualitative with a case study approach. Data collection from this study was carried out using literature, primary sources in the form of web portals and so on by analyzing studies and ideas. Carry out an inventory as well as analyze the context of the results of the portal formation and examine the possibility of traffic to the resulting archives. The results of the research conducted show that the need for crowdsourcing is the right choice for capturing reliable information obtained from the community. The readiness of human resources as well as facilities and infrastructure is the main capital in anticipating the occurrence of COVID-19 data increasing, digital archive management that the community can fully utilize. Obviously, it is supported by knowledge and policies that play an important role in the continuity of digital archive management in the world of health in particular. The benefit of this research is that it becomes a novelty in the world of Indonesian archives, especially in this field following the dynamic movements of the 5.0 industrial revolution technology era which is increasingly challenging both now and in the future. This becomes a challenge in creating an archive smart system. Able to provide benefits for public and nations.
